

An EMS programme for the Healthcare Sector

EcoHealth is a programme designed to help institutions in the Healthcare Sector to achieve a fully-functioning Environmental Management System (EMS) quickly, efficiently and cost-effectively. The scheme offers a flexible approach with recognition of progress made through four prestigious awards.

Why EcoHealth?

The aim of **EcoHealth** is to offer help and support to improve the sustainability performance of institutions in the Healthcare Sector.

The programme provides the tools, expertise and support required to implement change. It benchmarks the institution's current level of performance and recognises progress made.

It gives busy professionals in the healthcare sector the support they need to make a real difference.

The help and support comes in the form of training, software, telephone/email consultancy support and other resources. This is combined with an audit verified by EMS professionals.

Benefits:

Meet your stakeholder's and regulator's expectations.

EcoHealth will help your institution to take the lead in promoting sustainable development and meet the expectations of staff, clients, patients and other key stakeholders.

Improve your institution's sustainability performance.

Make progress in simple steps and demonstrate environmental improvements through the four awards.

Save costs & reduce risks

We will help you to identify cost savings and manage areas of environmental risk.

Who are we?

We are highly qualified and experienced EMS professionals with over 20 years' experience helping private and public sector organisations to develop, implement and operate an EMS.

We also run the EcoCampus programme for the HE and FE Sectors. This was launched in 2005 and has since delivered environmental improvements for over 60 universities and colleges, using a management system approach.

Competitively priced

EcoHealth is competitively priced. Please contact Loreus for details.

Who is this for?

EcoHealth is designed for organisations in the Healthcare Sector wishing to improve their environmental performance.

EcoHealth can help your institution to:

- provide a framework to manage environmental performance;
- assess your institution's environmental risks;
- achieve sector and regulatory compliance;
- provide evidence of action that is being taken to reduce the impact of your operations, products and services;
- promote your environmental achievements to your staff, clients, patients and the wider community;
- learn from best practice within the sector;
- have fast access to support from EMS professionals.

How do I join?

Please call us to speak with one of our **EcoHealth** EMS specialists to discuss your requirements and find out more.

Competence and awareness
Communication
Documented information
Operational planning and control
Emergency preparedness and response

PLATINUM
Monitoring, measuring, analysis and evaluation
Evaluation of compliance
Nonconformity and corrective action
Internal audit
Management review

What's Included

Audit

We conduct internal audits to assess progress made and arrange an external audit developed in partnership with a UKAS accredited EMS certification body.

Consultancy Support

We provide email, telephone, video-conferencing and one-to-one support.

Training

We run regular workshops to help with implementing various stages of the EMS process. We also offer a series of e-learning courses to help EMS Manager and others involved in the EMS process such as internal auditors. Certificates of completion are provided as evidence for your CPD portfolio.

Software tools

The programme also comes with software tools to aid the development and operation of an EMS.

Resources

We provide comprehensive guides, templates and supporting documents in an easy to use document control system.
