

## ISO 50001 Complete

Our ISO 50001 Complete package provides everything you need for your energy management system (EnMS), and to meet the requirements of the international energy management system standard ISO 50001:2011. The package contains an 'off-the-shelf' EnMS and is stored within an online system that allows you to manage user access and document version history.

### Save time and money

This package comes pre-populated with a comprehensive set of ISO 50001:2011 procedures and templates along with a management system index for you to use.

All you have to do is modify the documents to reflect the way your organisation operates. You will very quickly have all the documents you need for your EnMS.

### Reduce administration

The online system will manage all your documented information for you, ensuring safe storage and version control.

### Flexible

The online system can also accommodate your existing management system documents. The system stores these in a series of organised folders, matching the ISO 50001 standard, making it simple to find the one you want.

### Control access

You can control who is able to edit documents and who can only view them. The system is web-based and can be accessed anytime, from anywhere.

In the system, you can ensure that only the latest version of a document is visible to users, thus avoiding confusion and potential non-conformities.

### Email and telephone support

The EnMS consultants at Loreus will provide free support to help you implement your EnMS and answer any questions you may have.

### Achieve certification

Our ISO 50001 package will help you successfully achieve certification to ISO 50001:2011.

### Detailed examples

Our package also provides you with detailed examples that you can follow, created by the expert EnMS consultants at Loreus.

### EMS training

We can also provide on-line courses to help train your staff.

## Why choose the ISO 50001 Complete package ?

- It's the fastest way to implement an EnMS to the ISO 50001:2011 standard.
- Reduce the administrative burden of operating your EMS.
- Simplify the operation of your EnMS.
- It's a complete pre-made EnMS that you can adapt to meet your needs.
- Telephone and email support is included at no extra cost.
- It comes with a free online introduction to the package.
- You will save a significant amount of time and money using this package.
- You can access your management system from anywhere in the world.
- We can provide online training courses on EnMS implementation and operation.

### Other services available from Loreus Ltd:

To further support your EnMS, Loreus also provides consultancy support and a suite of related e-learning courses. Visit [www.loreus.com](http://www.loreus.com) for further information.

## What the package contains

### *All of the required ISO 50001:2015 documented information*

The primary feature of the ISO 50001 Complete package is a collection of written documents which fulfil all requirements of the ISO 50001:2011 standard. This 'off-the-shelf' EnMS will save you many hours of work, compared to creating all of the documents yourself. This package has been created by our team of practicing EnMS consultants.

The package has been designed so that you can either edit the procedures to match processes currently used by your organisation, or adopt the processes described in each of the procedures.

### *Tried and tested*

For over 15 years, Loreus has assisted organisations to successfully implement EnMSs and gain third party certification, across a wide variety of sectors.

### *System folder structure*

All of the documented information is organised according to a file structure which mimics the ISO 50001:2011 standard:

- General requirements
- Management responsibility
- Energy policy
- Energy planning
- Implementation & operation
- Performance evaluation
- Checking
- Management review

### *Detailed examples*

Included as part of the package are numerous detailed examples covering the practical aspects of implementing an EMS to the ISO 50001:2011 standard. A sample of these example documents are listed below:

- EnMS manual
- EnMS management structure
- Sample EnMS policy
- Environmental policy
- EnMS internal audit programme
- 1.2. Legal & other requirements related to energy use
- 2.2. Competence, training & awareness
- 4.2. Energy policy
- 4.5.3. Communication
- 4.5.4. Documentation
- 4.5.5. Operational control

All of the example documents have been created using the experience and best practice used by Loreus consultants, to provide you with an excellent starting point for meeting the standard's requirements.
