

Environmental Awareness Course: delivered by e-learning

Our Environmental Awareness course has been designed for those who need to gain an overview of environmental issues. This course can also be used as your organisation's route to compliance with the general environmental awareness requirements of ISO 14001.

Course aims

The aim of this course is to help the staff in your organisation to:

- understand the various components of the environment and how they are damaged;
- become aware of the organisation's environmental management system (EMS);
- contribute towards meeting the organisation's objectives and targets for environmental improvement.

Course outcomes

At the end of the course, your staff will have an understanding of:

- the main components of the environment and the causes of damage to land, air and water;
- the role of EMSs in delivering environmental improvements;
- how they can help by saving electricity and water, reducing business travel and travel to work and reusing and recycling equipment.

Course benefits:

Designed by experts

With 20 years' experience, the practising consultants and training experts at Loreus have developed this course for the industry they work in.

Flexible e-learning

Start and finish the course as required; work at any pace, any time, anywhere.

Easy to use

The e-learning system has an intuitive user interface that simply guides delegates through the course.

Motivate & empower your staff

The course clearly explains the benefits of improved environmental performance to your staff.

Change behaviour

Use this course to encourage a change in behaviour to improve the organisation's environmental performance and drive down costs.

Entry qualifications

This course is open to everyone, no previous environmental knowledge is required.

How to register and pay for the course?

Simply go to the Loreus website, register on the site, select this course then make the payment online with a debit card, credit card or by using PayPal.

Access to the course is available as soon as the payment has cleared.

Competitively priced

This course is very competitively priced. Please refer to the Loreus website for full pricing information. Our prices include all the training materials and assessment costs.

Special rates apply for multiple users. This course can also be delivered traditionally. Please contact us for further details.

Working through the course

All the guidance and material needed to complete the course are provided when delegates enrol online.

How long does the course take?

It will take approximately 40 minutes to read the course content and take the test.

Online test and certificate

Those wishing to be awarded the **Loreus Environmental Awareness Certificate**, will have to pass an online, open book, multiple-choice test.

The pass mark for the test is 70% but delegates can have as many attempts at the test as they wish.

What happens if I have a problem?

Any problems, simply call or e-mail us using the details given below.

Continuing Professional Development (CPD)

Successful delegates are awarded **1 CPD hour/point** for their professional development portfolio.

Course Syllabus

This course is divided into four sections as follows:

- The environment;
- Environmental Management Systems (EMSs);
- How you can help;
- Conclusions and further study.

The environment

In this section, we explain the main components that make up the environment and the complex and delicate balance between them.

The environment can be easily damaged by our activities and the main causes of damage to land, air and water are outlined.

Environmental Management Systems (EMSs)

In this section, we provide background information on environmental management systems and how they can be used to control and improve an organisation's environmental performance, manage an organisation's environmental impacts, and ensure the organisation complies with environmental legislation and other requirements.

How you can help

In this section, we explain how individuals can help an organisation to meet its objectives and targets for reducing its impacts on the environment. For example, this involves initiatives for saving electricity and water, reducing business travel and travel to work and reusing and recycling equipment.

Conclusions and further study

This section gives an overview of the outcomes that should be achieved at the end of the course.

It also describes other related environmental courses that can be taken as part of a continuing professional development programme.
